Can you provide examples of file layouts read by Corte Certo?

Dados E Integrações · https://cortecerto.com/en/docs/can-you-provide-examples-of-file-layouts-read-by-corte-certo/

For the information present in the CSV or TXT file to be correctly interpreted by Corte Certo, it must follow the exact sequence in the table below:Part Height td>

Sequence	Information	Type of Information	Example
1	Part Code	Numeric	45 td>
2	Number of pieces	Numeric	20
3	Part Width	Numeric	340
4	Numeric	400.5	
5	Part Material	Numeric	200
6	Part Description	Alpha - Numeric	Back of closet

Therefore, in the CSV file each line will contain six fields, separated by a comma, as in the example below:

1,50,214,124,99000,part1

2,40,315,121,99000,part2

3,20,218,222,99000,cover1

4,30,418,300,99000,cover2

In the TXT file each line will contain seven fields, separated by TAB:

150 214 124 99000 piece 1 paint

2 40 315 121 99000 piece2 drill

3 20 218 222 99000 cap1 drill

4 30 418 300 99000 cap2 drill
